
(a) Full-pool metric
past $D_{\leq t}$
future $D_{>t}$
scores against the whole corpus
no date bound
(b) Date-bounded metric
past $D_{\leq t}$
future $D_{>t}$
scores against $D_{\leq t}$ only
dated inputs only
(c)
Measurement uses records dated at or before t within a fixed snapshot
stress test
Annual snapshot
corpus D_t
concept units
$c_1, \ldots, c_k$
Concept graph G_t
co-occurrence in D_t
entry and survival classes
Temporal alignment
trailing 3-year SGNS
V_t W_t V_{t-1}
graph-stable anchors, then Procrustes
Typed TSND profile
applicability by type
LE_t
NS_t
RC_t
undefined components remain missing
Downstream check
LightGBM with isotonic calibration
three-year uptake
retrospective ranking
LE_t lexical emergence
$1 -$ cos to the *nearest* prior vector for entering terms
feeds the forecaster
NS_t neighborhood shift
$1 -$ cos to the concept's *own* prior vector for surviving terms
measurement only
RC_t recombination
$1 - P_t(u, v)$, residualized on $Z_t = \log(\deg_t(u) \deg_t(v) + 1)$
forecast input for eligible pairs
